Profile

Frontend Developer with several years of professional experience building, maintaining, and scaling modern web applications in real production environments. Strong focus on clean architecture, user experience, and maintainable code. Experienced with React, Vue.js, TypeScript, Laravel, REST APIs, and enterprise-level web applications. I also actively use modern AI tools to improve development workflows, accelerate problem-solving, and deliver reliable, efficient solutions.

PRACTICAL EXPERIENCES

01/2025 – 2026

ITM Technologies

Frontend Developer

Development of web application eRechnung2Go - an application for creating, managing and validating electronic invoices in accordance with German electronic Invoicing standards (XRechnung). As full-time Frontend Developer I was in charge of:

- Developing a user-friendly interface for invoice creation and management
- Implementing PDF-based visual representation of invoices using the jsPDF library
- Building views for visualization and management of incoming and outgoing invoices
- Designing and implementing scheduled tasks for invoice-related processes
- Developing a configuration wizard for task scheduling, enabling automated invoice creation and sending based on predefined rules and parameters (timing, conditions, and workflows)

Acquired skills: Using Vue.js Composition API, PrimeVue library, ASP.NET backend REST API integration, using GitHub Copilot to improve development efficiency, code quality, and productivity

04/2024 – 2025

ITM Technologies

Frontend Developer

Development of web application Stammdaten2Go - an application for centralized management of master data (customers, companies, contacts, legal and tax data), with a focus on accuracy, versioning and integration with other business systems (DATEV). As full-time Frontend Developer I was in charge of:

- Developing complex forms and multi-step wizards for structured client data collection
- Implementing document management interfaces, including document upload, listing, preview, and various document-related actions
- Implementing data synchronization workflows with the German DATEV system to ensure accurate and consistent exchange of business and financial data
- Integrating digital signature functionality using the Yousign platform for secure document signing processes
- Implementing subscription and payment-related frontend flows through integration with Stripe APIs

Acquired skills: Using the Vue.js Composition API, PrimeVue library, and ASP.NET REST API integration

11/2018 – 2023

Freelancer-web developer

Full-Stack Web Developer

Development of the Website of the Institute for Development and Innovation - IRI

[http: /iri.rs/](http://iri.rs/) As a Full-Stack Web Developer, I was responsible for:

- Developing and maintaining a responsive web presentation using Laravel, HTML, CSS, and Bootstrap
- Designing and implementing an administrative panel for content and data management
- Building CRUD functionalities for managing news, projects, and analytical content
- Implementing user management features, including roles and access control
- Developing end-to-end web solutions, covering both backend logic and frontend presentation

Acquired skills: Creating a complete technical specification for a website for a client. Client communication and negotiations, presenting technical solutions, time management and task prioritization, ownership and responsibility for deliverables

03/2018 – 11/2018

Cubes School

Junior Web Developer/ Intern

Employer: Cubes School As junior web developer I participated in the development of web store in PHP and blog in Laravel. Position: Junior Web Developer/ Acquired skills: Creating CRUD, Hosting a website, Creating Laravel projects from scratch
